Forms

Optimise your business processes

Impaorsa has provided forms to meet our customers' needs since the company was founded back in the eighties. The ongoing pursuit of that satisfaction and adaptation to the current market has led to us today having the capacity to offer forms with up to 10 printing inks, with different finishes, customised, or even in your integrated documents.

Types

- **Post (self envelopes):** This is a form with glue (high pressure, thermal, contact, re-wettable or double-sided tape) applied to it that becomes an envelope that can be closed manually or automatically. These forms represent a saving in time and money because handling for mailing is optimised and there is no need to purchase envelopes.
- **Snap-out:** This type of form consists of several sheets or copies, connected on one side.
- **Datamailing:** This form consists of several sheets attached on all four sides and forming an envelope. These forms can have sheets with downloaded data, and even sheets of paper inserted inside the envelope. As the information stays hidden inside the envelope, it ensures security in processing confidential data.

What is its scope of application?

- Invoices.
- Delivery notes.
- Normal or confidential payroll.
- Receipts.
- Fines.
- Official requests/applications.
- PIN.
- Repair orders.
- Contracts.
