PIN I-CODE

A PIN patented by Impaorsa

Impaorsa has developed and patented the most secure media for the transmission and delivery of confidential business information (secret numbers, validation codes, promotional awards or other data that require protection with the maximum security).

This innovative idea is based on the concealment of data through the colour camouflage and image decomposition, a safe, simple and visually appealing way to preserve the confidentiality of the most sensitive of data.

Impaorsa has developed and patented the most secure media for the transmission and delivery of confidential business information (secret numbers, validation codes, promotional awards or other data that require protection with the maximum security).

The I-Code application provides the user with a simple form of comprehensive security that enables the immediate detection of any tampering.

Advantages

- Maximum security; the image is hidden and unstructured.
- The process of composition and manipulation is done easily and simply; this extremely safe method provides a high degree of confidence in the recipient.
- Comprehensive security that allows the immediate detection of any tampering.
- Impact: this new concept of concealment is surprisingly brilliant.
